 TIMOTHY P. CALLAHAN
 SUPERVISORY PATENT EXAMINER

DETAILED ACTION

Response to Amendment

1. The amendment received on 9/9/2005 has been reviewed and considered with the following results:

As to the objection to the drawings, Applicant's revision of the drawings has overcome the objection, as such; the objection has been withdrawn.

As to the objection to claim 25, Applicant's amendment has overcome the objection, as such; the objection has been withdrawn.

As to the rejection to claim 52, under 35 U.S.C. 112, 2nd paragraph, Applicant's amendment has overcome the rejections, as such; the rejection has been withdrawn.

As to the prior art rejections to the claims, Applicant's amendment has overcome the prior art rejections, as such; the prior art rejections have been withdrawn. The case is found to be in allowance condition.

REASON FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: Applicant has amended the base claims to include the claim that would be allowable if rewritten in independent form as stated in the previous Office Action. As to pending claims of the application, the prior art of record fails to disclose a phase detector circuit (80 in instant Fig. 8), having specific structural limitations such as a first delay circuit (84) having an output and an input coupled to receive the first input signal (CLK_REF), the first delay circuit being operable to delay the first input signal by a first delay value and couple the delayed first input signal to the output; a second

delay circuit (90) having an output and an input coupled to receive the second input signal (CLK_FB), the second delay circuit being operable to delay the second input signal by a second delay value and couple the delayed second input signal to the output; a third delay circuit (88) having an output and an input coupled to receive the first input signal, the third delay circuit being operable to delay the first input signal by a third delay value and couple the delayed first input signal to the output; a fourth delay circuit (92) having an output and an input coupled to receive the second input signal, the fourth delay circuit being operable to delay the second input signal by a fourth delay value and couple the delayed second input signal to the output; a first flip-flop (upper 60) having a set input coupled to the output of the first delay circuit, a reset input coupled to the output of the second delay circuit, and a pair of complimentary first and second outputs; and a second flip-flop (lower 60) having a set input coupled to the output of the third delay circuit, a reset input coupled to the output of the fourth delay circuit, and a pair of complimentary first and second outputs (INCR, DECR), and being configured in combination with the rest of the limitations of the base claims and any intervening claims.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
